|                                                                                              |           |
|----------------------------------------------------------------------------------------------|-----------|
| <b>List of Symbols and Abbreviations.....</b>                                                | <b>6</b>  |
| <b>1. Introduction .....</b>                                                                 | <b>9</b>  |
| 1.1. Research Problem .....                                                                  | 9         |
| 1.2. State of the Art .....                                                                  | 14        |
| 1.3. Research Objectives .....                                                               | 15        |
| 1.4. Research Hypotheses.....                                                                | 17        |
| 1.5. Research Methods.....                                                                   | 18        |
| 1.6. Scope of the Dissertation.....                                                          | 19        |
| 1.7. Structure of the Dissertation .....                                                     | 21        |
| <b>2. Concept of the INNOBAT System .....</b>                                                | <b>24</b> |
| 2.1. Requirements for Bathymetric Measurements in Shallow Waterbodies..                      | 24        |
| 2.2. Design Assumptions of the INNOBAT System .....                                          | 30        |
| 2.3. INNOBAT System Architecture.....                                                        | 33        |
| 2.4. Originality and Innovation of the INNOBAT System Compared with Existing Solutions.....  | 36        |
| <b>3. Data Integration Model for Bathymetric Monitoring Using UAV and USV Platforms.....</b> | <b>38</b> |
| 3.1. Hydroacoustic and Optoelectronic Data Integration .....                                 | 38        |
| 3.2. Shallow-Water Depth Determination .....                                                 | 51        |
| 3.3. Shoreline Extraction.....                                                               | 58        |
| 3.4. GIS-Based Implementation of the INNOBAT System.....                                     | 65        |
| <b>4. Design and Implementation of the Optoelectronic Module for UAVs .....</b>              | <b>72</b> |
| 4.1. Concept and Functionality .....                                                         | 72        |
| 4.2. Technical Specifications .....                                                          | 75        |
| 4.3. Mainboard Design .....                                                                  | 79        |
| 4.4. Communication System .....                                                              | 84        |
| 4.5. Component Integration .....                                                             | 85        |
| 4.6. Prototype Development .....                                                             | 100       |

|           |                                                                                                    |            |
|-----------|----------------------------------------------------------------------------------------------------|------------|
| <b>5.</b> | <b>Methodology for Bathymetric and Photogrammetric Surveys Using UAV and USV Platforms.....</b>    | <b>103</b> |
| 5.1.      | Assessment of USV Positioning Accuracy Using GNSS/INS Systems During Bathymetric Measurements..... | 103        |
| 5.2.      | Assessment of UAV Positioning Accuracy Using GNSS RTK During Photogrammetric Surveys.....          | 118        |
| 5.3.      | Bathymetric Survey Methodology Using a USV in the Coastal Zone .....                               | 133        |
| 5.4.      | Photogrammetric Survey Methodology Using a UAV in the Coastal Zone                                 | 139        |
| 5.5.      | Integrated Bathymetric and Photogrammetric Survey Methodology .....                                | 150        |
| <b>6.</b> | <b>Validation of an SVR-Based Method for Shallow-Water Depth Determination.....</b>                | <b>156</b> |
| 6.1.      | Study Areas.....                                                                                   | 156        |
| 6.2.      | Measurement Equipment .....                                                                        | 159        |
| 6.3.      | Bathymetric and Photogrammetric Measurements.....                                                  | 161        |
| 6.4.      | Geospatial Data Processing .....                                                                   | 168        |
| 6.5.      | Results .....                                                                                      | 169        |
| 6.6.      | Discussion.....                                                                                    | 176        |
| <b>7.</b> | <b>Validation of the INNOBAT System under Field Conditions ..</b>                                  | <b>177</b> |
| 7.1.      | Study Area .....                                                                                   | 177        |
| 7.2.      | Measurement Equipment .....                                                                        | 178        |
| 7.3.      | Bathymetric and Photogrammetric Measurements.....                                                  | 181        |
| 7.4.      | Geospatial Data Processing.....                                                                    | 185        |
| 7.5.      | Results .....                                                                                      | 191        |
| 7.6.      | Discussion.....                                                                                    | 194        |
| 7.7.      | Additional Measurement Campaigns .....                                                             | 195        |
| <b>8.</b> | <b>Commercialisation and Implementation of the INNOBAT System.....</b>                             | <b>201</b> |
| 8.1.      | Target Users and Stakeholders.....                                                                 | 201        |
| 8.2.      | Strategic Infrastructure Development .....                                                         | 202        |
| <b>9.</b> | <b>Scientific Contributions.....</b>                                                               | <b>204</b> |
| 9.1.      | Research Framework .....                                                                           | 204        |
| 9.2.      | Original Scientific Contributions .....                                                            | 204        |
| 9.3.      | Synthesis of the Scientific Contributions .....                                                    | 207        |

|                                                                |            |
|----------------------------------------------------------------|------------|
| <b>10. Conclusions and Directions for Future Research.....</b> | <b>209</b> |
| 10.1. General Conclusions .....                                | 209        |
| 10.2. Final Scientific Statement.....                          | 212        |
| 10.3. Directions for Future Research .....                     | 213        |
| References.....                                                | 215        |
| List of Figures .....                                          | 228        |
| List of Tables .....                                           | 233        |
